

MICROMECHANICAL OPTICAL SWITCH

ABSTRACT OF THE DISCLOSURE

An optical switch element is described, which includes a fixed layer disposed outwardly from a substrate and a movable mirror assembly disposed
5 outwardly from the fixed layer. The moveable mirror assembly is operable to move relative to the fixed layer responsive to a voltage applied to the movable mirror assembly. In a particular embodiment, the movable mirror assembly includes an inner strip spaced apart from the
10 fixed layer by a first distance and an outer strip disposed approximately adjacent to the inner strip and spaced apart from the fixed layer by a second distance which is greater than the first distance. The optical transmission of the optical switch element changes
15 depending on the position of the movable mirror assembly.
